

這裡主要紀錄如果開發上需要在本地測試 Flow Studio 的話會需要處理的幾個步驟

1. Flowstudio 需要用的是 Python 3.7 ，已經沒有被維護，沒辦法用虛擬環境管理工具直接下載，要去底下

[Python Releases for Windows | Python.org](https://www.python.org/downloads/windows/)

這裡下載，安裝後用 `py --list` 檢查是否成功安裝

用 `py -3.7 -m venv .venv` 建立虛擬環境

2. 如果要接 local 端的 AI agent service 要改以下的地方

- `thread_worker.py`

```
ws_url = "ws://localhost:14080/flowai/ws/getAgentResponse_v4"
```

- `constant.json`

```
"env": "prod"
```

- `flow_ai_manager.py`

```
email = 'local@test'
```

```
token = self.parent.license_mechanism.token if
```

```
self.parent.license_mechanism.user is not None else "test_token"
```

- `flow_build_manager.py`

```
VERSION = "2.3.5-pro"
```

- `flow_license_mechanism.py`

```
def __init__(self, parent: 'QWidget' = None, is_testing=True, splash = None):
```

- `flow_window.py`

```
# Load hidapi.dll using absolute path based on module location
```

```
_dll_path =
```

```
os.path.abspath(os.path.join(os.path.dirname(__file__), '..', 'bin', 'hidapi.dll'))
```

```
ctypes.CDLL(_dll_path)
```

3. 啟動指令

```
.venv\Scripts\Activate.ps1; $env:PYTHONPATH = ".."; python main.py
```

可能路徑上還需要一些調整，但整體而言的流程大致就跟上面一樣，應該就不會有其他問題了。
